

Replacing Glass in Doors

DOOR

- **Pane is held in place with 4 moldings (yellow), which are nailed in with brads. There is no glazing.**
- **I have to locate whichever piece locks the other 3 pieces in place, and remove it.**
 - *If the molding is damaged during removal, it must be replaced.*
 - *If molding profile is no longer in production, I need to try to duplicate it from scratch.*
- **Most (all?) municipalities require use of tempered glass in doors.**
